SBC 127mm Plug Set

Drill easy fix holes in solid boards in under a minute

Solid Board Cutter provides users with a simple and easy solution for drilling access holes in solid board flooring – no need for interjoist sawing.

When used together with removable solid plug caps, this product produces a neat access hole which lies flush with the floor and allows re-entry for future access requirements.

Rapidly creating a 127mm diameter hole in under one minute, the Solid Board Cutter features 8% Cobalt HSS tipped teeth for durability, lasting at least 100% longer than a standard bi-metallic holesaw.

A precision manufactured depth-stop ring and HSS rebating cutters allow SBC caps to precisely locate in the flooring for a neat finish with 100% accuracy.

SBC can be used in flooring grade chipboard up to 22mm thick.

Set contains:

- 1 x 127mm Cobalt Solid Board Cutter
- 3 x 127mm Plugs
