

AC66353

5m² Decoupling Membrane for use with 3mm cables

This system acts as a two in one product being both a fully functioning decoupling membrane as well as a cable carrier mat for 3mm cables. The decoupling membrane guards against sub floor movement and stress cracking.

The decoupling membrane also provides significant protection to the heating cables during the installation of floor tiles and improves the heat up time and energy efficiency of all underfloor heating systems.

Technical Specification

Dimensions 5m x 1m

Mat Thickness 6mm

Material Polypropylene

Colour Yellow

Backing Material Fleece

Manufactured In Germany

- Combine decoupling membrane and cable carrier for speedy installation
- Heating cables are protected from trowel work
- Vary cable spacing to provide targeted heat where required
- Speedy installation without needing double-sided tape
- No need for tapes or glue to hold down the heating cables
- Simple to cut on-site to provide complete floor coverage
- The membrane removes floor movement to prevent tiles cracking
- Protects the floor covering from movement in three dimensions
